Yue Zhang, Oregon State University, United States

AUXILIARY REVIEWERS

Florian Evequoz, University of Fribourg, Switzerland

Kostiantyn Kucher, ISOVIS Group, Linnaeus University, Sweden

Rafael Martins, Linnaeus University, Sweden

Jorge Piazzentin Ono, NYU, United States

SELECTED PAPERS BOOK

A number of selected papers presented at IVAPP 2018 will be published by Springer in a CCIS Series book. This selection will be done by the Conference Chair and Program Co-chairs, among the papers actually presented at the conference, based on a rigorous review by the IVAPP 2018 Program Committee members.

FOREWORD

This book contains the proceedings of the 13th International Conference on Computer Vision, Imaging and Computer Graphics Theory and Applications (VISIGRAPP 2018) which was organized and sponsored by the Institute for Systems and Technologies of Information, Control and Communication (INSTICC), in cooperation with AFIG and Eurographics.

The proceedings here published demonstrate new and innovative solutions and highlight technical problems in each field that are challenging and worthwhile being disseminated to the interested research audiences.

VISIGRAPP 2018 was organized to promote a discussion forum about the conference's research topics between researchers, developers, manufacturers and end-users, and to establish guidelines in the development of more advanced solutions.

We received a high number of paper submissions for this edition of VISIGRAPP, 321 in total, with contributions from all five continents. This attests to the success and global dimension of VISIGRAPP. To evaluate each submission, we used a double-blind evaluation method where each paper was reviewed by two to six experts from the International Program Committee (IPC).

The IPC selected for oral presentation and for publication as full papers 14 papers from GRAPP, 6 for HUCAPP, 12 papers for IVAPP, and 40 papers for VISAPP, which led to a result for the full-paper acceptance ratio of 22% and a high-quality program. Apart from the above full papers, the conference program also features 83 short papers and 68 poster presentations. We hope that these conference proceedings, which are submitted for indexation by Thomson Reuters Conference Proceedings Citation Index, INSPEC, DBLP, and EI, will help the Computer Vision, Imaging, Visualization and Computer Graphics communities to find interesting research work. Moreover, we are proud to inform that the program also includes four plenary keynote lectures, given by internationally distinguished researchers, namely Carol O'Sullivan (Trinity College Dublin, Ireland), Alexander Bronstein (Israel Institute of Technology, Tel Aviv University and Intel Corporation, Israel), Falk Schreiber (University of Konstanz, Germany and Monash University Melbourne, Australia) and Catherine Pelachaud (CNRS/University of Pierre and Marie Curie, France), thus contributing to increase the overall quality of the conference and to provide a deeper understanding of the conference's interest fields.

Furthermore, a short list of the presented papers will be selected to be expanded into a forthcoming book of VISIGRAPP Selected Papers to be published by Springer during 2018 in the CCIS series. All papers presented at this conference will be available at the SCITEPRESS Digital Library. Two awards are delivered at the closing session, to recognize the best conference paper and the best student paper for each of the four tracks.

The meeting is complemented with the Special Session on Visual Computing in Engineering Applications (VCEA) and two tutorials entitled "Visual Intelligence in Egocentric (First-Person) Vision Systems" and "Understanding Human Motion Primitives".

We would like to express our thanks, first of all, to the authors of the technical papers, whose work and dedication made possible to put together a program that we believe to be very exciting and of high technical quality. Next, we would like to thank the Area Chairs, all the members of the program committee and auxiliary reviewers, who helped us with their expertise and time. We would also like to thank the invited speakers for their invaluable contribution and for sharing their vision in their talks. Special thanks should be addressed to the INSTICC Steering Committee whose invaluable work made this event possible.

We wish you all an exciting conference and an unforgettable stay in Funchal, Madeira, Portugal. We hope to meet you again for the next edition of VISIGRAPP, details of which are available at <http://www.visigrapp.org>.

PAPERS

FULL PAPERS

- SmoothIsoPoints: Making PDE-based Surface Extraction from Point-based Volume Data Fast 17
Paul Rosenthal, Vladimir Molchanov and Lars Linsen
- Overcoming the Curse of Dimensionality When Clustering Multivariate Volume Data 29
Vladimir Molchanov and Lars Linsen
- TagPies: Comparative Visualization of Textual Data 40
Stefan Jänicke, Judith Blumenstein, Michaela Rücker, Dirk Zeckzer and Gerek Scheuermann
- Exploring Flow Metrics in Dense Geographical Networks 52
Valentino Di Donato, Maurizio Patrignani and Claudio Squarcella
- MultiVisA: Visual Analysis of Multi-run Physical Simulation Data using Interactive Aggregated Plots 62
Alexey Fofonov and Lars Linsen
- A Visual Analytics Framework for Exploring Uncertainties in Reservoir Models 74
Zahra Sahaf, Hamidreza Hamdi, Roberta Cabral Ramos Mota, Mario Costa Sousa and Frank Maurer
- Designing a Classification for User-authored Annotations in Data Visualization 85
Pierre Vanhulst, Florian Évéquoz, Raphaël Tuor and Denis Lalanne
- PreechVis: Visual Profiling using Multiple-word Combinations 97
Seongmin Mun, Gyeongcheol Choi, Guillaume Desagulier and Kyungwon Lee
- A New Approach to GraphMaps, a System Browsing Large Graphs as Interactive Maps 108
Debajyoti Mondal and Lev Nachmanson
- TabularVis – A Circos-inspired Interactive Web Client based Tool for Improving the Clarity of Tabular Data Visualization 120
György Papp and Roland Kunkli
- An Evolutionary Algorithm for an Optimization Model of Edge Bundling 132
Joelma Ferreira, Hugo Nascimento and Les Foulds

Orthogonal Compaction using Additional Bends <i>Michael Jünger, Petra Mutzel and Christiane Spisla</i>	144
SHORT PAPERS	
To Paint in Tongues - Interactive, Artistic and Mobile Information Visualization for Social Media Texts - Creativity Enhancement by Painting with Tweets on a Smart Tablet <i>Robin Horst and Elisabeth Franziska Stein</i>	159
DoSVis: Document Stance Visualization <i>Kostiantyn Kucher, Carita Paradis and Andreas Kerren</i>	168
Bifocal Parallel Coordinates Plot for Multivariate Data Visualization <i>Gurminder Kaur and Bijaya B. Karki</i>	176
Optical Graph Edge Recognition <i>Rudolfs Opmanis</i>	184
Visualizing Text Data in Space and Time to Augment a Political News Broadcast on a Second Screen <i>Christina Niederer, Wolfgang Aigner, Kerstin Blumenstein, Štefan Emrich and Markus Wagner</i>	192
Data Visualization Support for Complex Logistics Operations and Cyber-Physical Systems <i>Didem Gürdür, Klaus Raizer and Jad El-Khoury</i>	200
Storytelling and Visualization: A Survey <i>Chao Tong, Richard Roberts, Robert S. Laramée, Kodzo Wegba, Aidong Lu, Yun Wang, Huamin Qu, Qiong Luo and XiaoJuan Ma</i>	212
Data Aggregation and Distance Encoding for Interactive Large Multidimensional Data Visualization <i>Desislava Decheva and Lars Linsen</i>	225
Visual GISwaps - An Interactive Visualization Framework for Geospatial Decision Making <i>Goran Milutinovic and Stefan Seipel</i>	236
Visual Analysis and Exploration of Entity Relations in Document Collections <i>Markus John, Florian Heimerl, Ba-Anh Vu and Thomas Ertl</i>	244
<i>Parallel Bubbles</i> - Evaluation of Three Techniques for Representing Mixed Categorical and Continuous Data in Parallel Coordinates <i>Raphaël Tuor, Florian Evéquoz and Denis Lalanne</i>	252
Annotations as a Support for Knowledge Generation - Supporting Visual Analytics in the Field of Ophthalmology <i>Christoph Schmidt, Paul Rosenthal and Heidrun Schumann</i>	264
EvoCells - A Treemap Layout Algorithm for Evolving Tree Data <i>Willy Scheibel, Christopher Weyand and Jürgen Döllner</i>	273
Slice-based Visualization of Brain Fiber Bundles - A LIC-based Approach <i>Stefan Philips, Mario Hlawitschka and Gerik Scheuermann</i>	281
Design Study for Creating Pathfinder: A Visualization Tool for Generating Software Test Plans using Model based Testing <i>Kuruvilla Lukose, Shivam Agarwal, Vidyashankar Nagesha Rao and Jaya Sreevalsan-Nair</i>	289
Layered Graph Force-driven Vertex Positioning <i>Radek Mařík</i>	301

Area Preserving Dynamic Geospatial Visualization on Physical Globe <i>Shima Dadkhahfard, Katayoon Etemad, John Brosz and Faramarz Samavati</i>	309
A Tale of Two Visions - Exploring the Dichotomy of Interest between Academia and Industry in Visualisation <i>Richard Roberts, Robert Laramée, Paul Brookes, Gary A. Smith, Tony D’Cruze and Matt J. Roach</i>	319
Quantitative Evaluation of Multi-Type Edge Bundling - Example for Japan Airmap <i>Ryosuke Saga</i>	327
Performance Visualization for TAU Instrumented Scientific Workflows <i>Cong Xie, Wei Xu, Sungsoo Ha, Kevin Huck, Sameer Shende, Hubertus Van Dam, Kerstin Kleese Van Dam and Klaus Mueller</i>	333
Digital Visual Exploration Library <i>Nicholas Tan Jerome and Andreas Kopmann</i>	341
Mirroring Sankey Diagrams for Visual Comparison Tasks <i>Zana Vosough, Dietrich Kammer, Mandy Keck and Rainer Groh</i>	349
Symmetric Generative Methods and tSNE: A Short Survey <i>Rodolphe Priam</i>	356
AUTHOR INDEX	365

INVITED SPEAKERS

KEYNOTE SPEAKERS

The Perception of Physical Interactions in Mixed Reality

Carol O'Sullivan

Trinity College Dublin, Dublin, Ireland

Abstract: Causality is perceived when it can be seen that an event causes a particular response to occur. When errors in the laws of physics are perceived, the event no longer appears to be plausible to the viewer. Take the example of a recent augmented reality game for phones: Pokemon Go. When a user “throws” a virtual pokeball, it either hits or misses a virtual target overlaid on the real world. However, there is no physical interaction between the ball and the real world. Now consider playing a similar game in Mixed Reality: the user perceives that the virtual ball is really in her hand; when it is thrown she feels that the forces she has exerted have caused the resulting motion of the ball; When she hits the virtual target or misses and hits a real object, she perceives its response as physically plausible. In this ideal setting, the perception of causality has been maintained. Such experiences in Mixed Reality have not yet been achieved, and in this talk the challenges of doing so will be discussed along with an overview of our previous research results that could help.

BRIEF BIOGRAPHY

Carol O'Sullivan is the Professor of Visual Computing in Trinity College Dublin and head of the Graphics, Vision and Visualization (GV2) research group. From 2013-2016 she was a Senior Research Scientist at Disney Research in Los Angeles and also spent a year's sabbatical as a Visiting Professor in Seoul National University from 2012-2013. She joined TCD in 1997 and served as the Dean of Graduate Studies from Jul'2007 to Jul'2010. Her research interests include Graphics & Perception, Computer Animation, Crowd and Human simulation. She was co-Editor in Chief for the ACM Transactions on Applied Perception (TAP) for six years. Carol has been a member of many international program committees, reviewer for various journals, and served many times on the papers committees for the ACM SIGGRAPH and Eurographics conferences. She has chaired several conferences and workshops and is currently serving as program co-chair for Intelligent Virtual Agents (IVA 2017) and Motion in Games (MIG 2017). Prior to her PhD studies, she spent several years in industry working in Software Development. She was elected a fellow of Trinity College for significant research achievement in 2003 and of the European Association for Computer Graphics (Eurographics) in 2007.

Geometry and Learning in 3D Shape Processing Problems

Alexander Bronstein

Israel Institute of Technology, Tel Aviv University and Intel Corporation, Tel Aviv, Israel

Abstract: The need to analyze, synthesize and process three-dimensional objects is a fundamental ingredient in numerous computer vision and graphics tasks. In this talk, I will show how several geometric notions related to the Laplacian spectrum provide a set of tools for efficiently manipulating deformable shapes. I will also show how this framework combined with recent ideas in deep learning promises to bring shape processing problems to new levels of accuracy.

BRIEF BIOGRAPHY

Alex Bronstein is an associate professor of computer science at the Technion – Israel Institute of Technology, holding a second affiliation in the School of Electrical Engineering at Tel Aviv University, and a principal engineer at Intel Corporation. His research interests include numerical geometry, computer vision, and machine learning. Prof. Bronstein has authored over 100 publications in leading journals and conferences, over 30 patents and patent applications, the research monograph "Numerical geometry of non-rigid shapes", and edited several books. Highlights of his research were featured in CNN, SIAM News, Wired. In addition to his academic activity, he co-founded and served as Vice President of technology in the Silicon Valley start-up company Novafora (2005-2009), and was a co-founder and one of the main inventors and developers of the 3D sensing technology in the Israeli startup Invision, subsequently acquired by Intel in 2012. Prof. Bronstein's technology is now the core of the Intel RealSense 3D camera integrated into a variety of consumer electronic products. Prof. Bronstein is also a co-founder of Videocites where he serves as Chief Scientist.

Immersive Analytics - Methodology and Applications in the Life Sciences

Falk Schreiber

University of Konstanz, Germany and Monash University Melbourne, na, Australia

Abstract: Immersive Analytics (IA) is a new research field that investigates methods and technologies which allow users to become immersed in the data and perform activities with focus, involvement and enjoyment. The goal of IA is to remove barriers between people, their data and the tools used. Immersive Analytics supports data understanding and decision making for individual users as well as for groups of people working collaboratively, in collocated and distributed groups. Immersive Analytics builds on technologies such as touch surfaces, immersive virtual and augmented reality environments and tracking devices, and seeks to join ideas and methods from several overlapping research fields such as human computer interaction, scientific visualisation, data mining, information visualisation and visual analytics. In this talk I will give an introduction to the research field of Immersive Analytics, look at ways to work with data in immersive environments, and present examples of IA applications for exploring and analysing data in the Life Sciences. These applications will cover a broad range of research questions as well as technologies (from CAVE2 to HMDs to monitor walls).

BRIEF BIOGRAPHY

Falk Schreiber graduated, obtained a PhD and a habilitation in Computer Science from the University of Passau (Germany). He has worked as Research Fellow, Research Group Leader and Professor at different institutions in Germany and Australia. He holds the positions of Professor for Practical Computer Science and Computational Life Sciences at the University of Konstanz (Germany) and Adjunct Professor at Monash University Melbourne (Australia). His main research interests are immersive analytics of biological data, network science for biological systems, integrative omics data analysis, graphical standards for systems biology, as well as modeling of metabolism. His work is strongly connected to questions regarding the visualisation and immersive analytics of life science data.

Modeling Human-agent Interaction

Catherine Pelachaud

CNRS/University of Pierre and Marie Curie, na, France

Abstract: During this presentation I will describe our research in modeling Embodied Conversational Agents that are able to maintain a conversation with human partners. These agents are endowed with socio-emotional capabilities. They can express their thoughts through gestures, facial expressions, head movement, etc. We have developed several techniques to create a large repertoire of behaviors. We have applied a wide range of methods, going from corpus analysis to theories from human and social sciences, user-perception approach, and lately machine learning. In this talk I will also present our platform of Embodied Virtual Agent Greta/VIB in which these works are implemented.

BRIEF BIOGRAPHY

Catherine Pelachaud is a Director of Research at CNRS in the laboratory ISIR, University of Pierre and Marie Curie. Her research interest includes embodied conversational agent, nonverbal communication (face, gaze, and gesture), expressive behaviors and socio-emotional agents. She is associate editors of several journals among which IEEE Transactions on Affective Computing, ACM Transactions on Interactive Intelligent Systems and Journal on Multimodal User Interfaces. She has co-edited several books on virtual agents and emotion-oriented systems. She is recipient of the ACM – SIGAI Autonomous Agents Research Award 2015. Her Siggraph'94 paper received the Influential paper Award of IFAAMAS (the International Foundation for Autonomous Agents and Multiagent Systems).
