# ORGANIZING COMMITTEES

---

## CONFERENCE CHAIR

Jose Braz, Escola Superior de Tecnologia de Setúbal, Portugal

## PROGRAM CO-CHAIRS

Andreas Kerren, Linnaeus University, Sweden

Christophe Hurter, French Civil Aviation University (ENAC), France

## AREA CO-CHAIRS

Jan-Henrik Haunert, University of Bonn, Germany

Stefan Jänicke, University of Southern Denmark, Odense, Denmark

Romain Vuillemot, LIRIS, France

## LOCAL CHAIRS

Sandro Spina, University of Malta, Malta

Keith Bugeja, University of Malta, Malta

## SECRETARIAT

Beatriz Seves, INSTICC, Portugal

## GRAPHICS PRODUCTION AND WEBDESIGNER

André Poeira, INSTICC, Portugal

## WEBMASTER

Carolina Ribeiro, INSTICC, Portugal

João Francisco, INSTICC, Portugal

# PROGRAM COMMITTEE

---

**Alfie Abdul-Rahman**, King's College London, United Kingdom

**George Baciu**, The Hong Kong Polytechnic University, Hong Kong

**Juhee Bae**, University of Skovde, Sweden

**Maria Beatriz Carmo**, Universidade de Lisboa, Portugal

**Ayan Biswas**, Los Alamos National Laboratory, United States

**David Borland**, University of North Carolina at Chapel Hill, United States

**Romain Bourqui**, University of Bordeaux, France

**Massimo Brescia**, Istituto Nazionale di Astrofisica, Italy

**Chris Bryan**, Arizona State University, United States

**Michael Burch**, Eindhoven University of Technology, Netherlands

**Guoning Chen**, University of Houston, United States

**Yongwan Chun**, University of Texas at Dallas, United States

**António Coelho**, Faculdade de Engenharia da Universidade do Porto, Portugal

**Danilo B. Coimbra**, Federal University of Bahia, Brazil

**Christoph Dalitz**, Niederrhein University of Applied Sciences, Germany

**Robertas Damasevicius**, Kaunas University of Technology, Lithuania

**Mihaela Dinsoreanu**, Technical University of Cluj-Napoca, Romania

**Georgios Dounias**, University of the Aegean, Greece

**Soumya Dutta**, Los Alamos National Laboratory, United States

**Achim Ebert**, University of Kaiserslautern, Germany

**Danilo Eler**, São Paulo State University, Brazil

## SELECTED PAPERS BOOK

---

A number of selected papers presented at IVAPP 2020 will be published by Springer in a CCIS Series book. This selection will be done by the Conference Chair and Program Co-chairs, among the papers actually presented at the conference, based on a rigorous review by the IVAPP 2020 Program Committee members.

# FOREWORD

---

This book contains the proceedings of the 15th International Joint Conference on Computer Vision, Imaging and Computer Graphics Theory and Applications (VISIGRAPP 2020) which was organized and sponsored by the Institute for Systems and Technologies of Information, Control and Communication (INSTICC), in cooperation with the ACM Special Interest Group on Computer Human Interaction (SIGCHI), the French Association for Computer Graphics (AFIG), the EUROGRAPHICS Portuguese Chapter, the European Association for Computer Graphics (EUROGRAPHICS) and the Society for Imaging Science and Technology (IS&T).

The proceedings here published demonstrate new and innovative solutions and highlight technical problems in each field that are challenging and worthy of being disseminated to the interested research audiences.

VISIGRAPP 2020 was organized to promote a discussion forum about the conference's research topics between researchers, developers, manufacturers and end-users, and to establish guidelines in the development of more advanced solutions.

We received a high number of paper submissions for this edition of VISIGRAPP, 455 in total, with contributions from 58 countries. This attests to the success and global dimension of VISIGRAPP. To evaluate each submission, we used a hierarchical process of double-blind evaluation where each paper was reviewed by two to six experts from the International Program Committee (IPC).

The IPC selected for oral presentation and for publication as full papers 16 papers from GRAPP, 8 from HUCAPP, 9 papers from IVAPP, and 46 papers from VISAPP, which led to a result for the full-paper acceptance ratio of 17% and a high-quality program. Apart from the above full papers, the conference program also features 118 short papers and 109 poster presentations. We hope that these conference proceedings, which are submitted for indexation by Thomson Reuters Conference Proceedings Citation Index, SCOPUS, DBLP, Semantic Scholar, Google Scholar, EI and Microsoft Academic, will help the Computer Vision, Imaging, Visualization, Computer Graphics and Human-Computer Interaction communities to find interesting research work. Moreover, we are proud to inform that the program also includes four plenary keynote lectures, given by internationally distinguished researchers, namely Matthias Niessner (Technical University of Munich, Germany), Anthony Steed (University College London, United Kingdom), Alan Chalmers (University of Warwick, United Kingdom) and Helen Purchase (University of Glasgow, United Kingdom), thus contributing to increase the overall quality of the conference and to provide a deeper understanding of the conference's interest fields.

Furthermore, a short list of the presented papers will be selected to be extended into a forthcoming book of VISIGRAPP Selected Papers to be published by Springer during 2020 in the CCIS series. Moreover, a short list of presented papers will be selected for publication of extended and revised versions in a special issue of the open access Information Journal (IVAPP), a special issue of the Pattern Recognition and Artificial Intelligence Journal (VISAPP) and a special issue of The Visual Computer journal (GRAPP and HUCAPP). All papers presented at this conference will be available at the SCITEPRESS Digital Library. Three awards are delivered at the closing session, to recognize the best conference paper, the best student paper and the best poster for each of the four conferences. There is also an award for best industrial paper to be delivered at the closing session for HUCAPP and VISAPP.

We would like to express our thanks, first of all, to the authors of the technical papers, whose work and dedication made it possible to put together a program that we believe to be very exciting and of high technical quality. Next, we would like to thank the Area Chairs, all the members of the program committee and auxiliary reviewers, who helped us with their expertise and time. We would also like to thank the invited speakers for their invaluable contribution and for sharing their vision in their talks. Special thanks should be addressed to the INSTICC Steering Committee whose invaluable work made this event possible.

We wish you all an exciting conference and an unforgettable stay in Valletta, Malta. We hope to meet you again for the next edition of VISIGRAPP, details of which are available at <http://www.visigrapp.org>.

## INVITED SPEAKERS

### KEYNOTE SPEAKERS

Semantic 3D Scene Understanding in RGB-D Scans <i>Matthias Niessner</i>	5
The Computing Challenges of Mixed-Reality <i>Anthony Steed</i>	7
High Dynamic Range: Where to next? <i>Alan Chalmers</i>	9
Experimental Pitfalls <i>Helen Purchase</i>	11

### PAPERS

#### FULL PAPERS

LilyPads: Exploring the Spatiotemporal Dissemination of Historical Newspaper Articles <i>Max Franke, Markus John, Moritz Knabben, Jana Keck, Tanja Blascheck and Steffen Koch</i>	17
Improving Neural Network-based Multidimensional Projections <i>Mateus Espadoto, Nina S. T. Hirata, Alexandre X. Falcão and Alexandru C. Telea</i>	29
Visual Exploration of 3D Shape Databases Via Feature Selection <i>Xingyu Chen, Guangping Zeng, Jiří Kosinka and Alexandru Telea</i>	42
Temporally Coherent Topological Landscapes for Time-varying Scalar Fields <i>Maria Herick, Vladimir Molchanov and Lars Linsen</i>	54
AnnoXplorer: A Scalable, Integrated Approach for the Visual Analysis of Text Annotations <i>Martin Baumann, Harutyun Minasyan, Steffen Koch, Kuno Kurzhals and Thomas Ertl</i>	62
musiXplora: Visual Analysis of a Musicological Encyclopedia <i>Richard Khulusi, Jakob Kusnick, Josef Focht and Stefan Jänicke</i>	76
MapStack: Exploring Multilayered Geospatial Data in Virtual Reality <i>Maxim Spur, Vincent Tourre, Erwan David, Guillaume Moreau and Patrick Le Callet</i>	88
Teaching on the Intersection of Visualization and Digital Humanities <i>Stefan Jänicke</i>	100
Visualizing Learning Space in Neural Network Hidden Layers <i>Gabriel D. Cantareira, Fernando V. Paulovich and Elham Etemad</i>	110

## SHORT PAPERS

Curtain Graphs: Using a Floating Baseline for Comparison in a Two-dimensional Graphical Space <i>Kassandra Raymond and Andrew Hamilton-Wright</i>	125
Visualization to Assist Interpretation of the Multilevel Paradigm in Bipartite Graphs <i>Diego S. Cintra, Alan Valejo, Alneu A. Lopes and Maria Cristina F. Oliveira</i>	133
DataShiftExplorer: Visualizing and Comparing Change in Multidimensional Data for Supervised Learning <i>Bruno Schneider, Daniel A. Keim and Mennatallah El-Assady</i>	141
Towards Collaborative and Dynamic Software Visualization in VR <i>Florian Jung, Veronika Dashuber and Michael Philippsen</i>	149
Combining Image and Caption Analysis for Classifying Charts in Biodiversity Texts <i>Pawandeep Kaur and Dora Kiesel</i>	157
Assessing the Feasibility of using Augmented Reality to Visualize Interventional Radiology Imagery <i>Christopher Bartlett, Noelle LeRoy, Damian Schofield, Jonathan Ford and Summer Decker</i>	169
Interactive 3D Visualization of Network Traffic in Time for Forensic Analysis <i>Daniel Clark and Benjamin Turnbull</i>	177
Visual Analysis of Billiard Dynamics Simulation Ensembles <i>Stefan Boshe-Plois, Quynh Quang Ngo, Peter Albers and Lars Linsen</i>	185
Visual-auditory Volume Rendering of Dynamic Quantum Chemistry Molecular Fields <i>Evgeniya Malikova, Valery Adzhiev, Oleg Fryazinov and Alexander Pasko</i>	193
Time-series Visualization of Twitter Trends <i>Atsuro Konishi and Hiroshi Hosobe</i>	201
Vague Visualizations to Reduce Quantification Bias in Shared Medical Decision Making <i>Michela Assale, Silvia Bordogna and Federico Cabitza</i>	209
A Genetic Algorithm Optimising Control Point Placement for Edge Bundling <i>Ryosuke Saga, Tomoki Yoshikawa, Ken Wakita, Ken Sakamoto, Gerald Schaefer and Tomoharu Nakashima</i>	217
Visualization of Data for Decision Making in a University <i>Gabriela Cruz-Guzmán and Lorna V. Rosas-Téllez</i>	223
Deep Dive into Deep Neural Networks with Flows <i>Adrien Halnaut, Romain Giot, Romain Bourqui and David Auber</i>	231
A Timeline Metaphor for Analyzing the Relationships between Musical Instruments and Musical Pieces <i>J. Kusnick, R. Khulusi, J. Focht and S. Jänicke</i>	240
Irosashi: Visualization of the Colors of a Building Which Leave an Impression to Identify Characteristics of an Urban Environment <i>Yota Kikuchi and Makoto Okamoto</i>	252
What ‘Work’ Can Dataviz Do in Popular Science Communication? <i>Martin Engebretsen</i>	260

A New Algorithm using Independent Components for Classification and Prediction of High Dimensional Data <i>Subhajit Chakrabarty and Haim Levkowitz</i>	265
A Taxonomy of Treemap Visualization Techniques <i>Willy Scheibel, Matthias Trapp, Daniel Limberger and Jürgen Döllner</i>	273
3D Printing and 3D Virtual Models for Surgical and Percutaneous Planning of Congenital Heart Diseases <i>Katia Capellini, Paolo Tripicchio, Emanuele Vignali, Emanuele Gasparotti, Lamia Ait Ali, Massimiliano Cantinotti, Duccio Federici, Giuseppe Santoro, Francesca Alfonzetti, Chiara Evangelista, Camilla Tanca and Simona Celi</i>	281
Interactive System Architecture Exploration: Case Studies with the IMiGEr Tool <i>Premek Brada, Richard Lipka, Lukas Holy and Kamil Jezek</i>	288
Dynamic Collaborative Visualization of the United Nations Sustainable Development Goals (SDGs): Creating an SDG Dashboard for Reporting and Best Practice Sharing <i>Kathleen Campbell Garwood, David Steingard and Marcello Balduccini</i>	294
GlyphsOME: Using SOM with Data Glyphs for Customer Profiling <i>Catarina Maçãs, Evgheni Polisciuc and Penousal Machado</i>	301
Usage of Visualization Techniques in Data Science Workflows <i>Johanna Schmidt</i>	309
In Situ Visual Quality Control in 3D Printing <i>Charalampos Kopsacheilis, Paschalis Charalampous, Ioannis Kostavelis and Dimitrios Tzouvaras</i>	317
Geovisualization: Multidimensional Exploration of the Territory <i>Sidonie Christophe</i>	325
AUTHOR INDEX	333

# **KEYNOTE SPEAKERS**

# Semantic 3D Scene Understanding in RGB-D Scans

Matthias Niessner

*Technical University of Munich, Germany*

**Abstract:** In this talk, I will cover our latest research on 3D reconstruction and semantic scene understanding. To this end, we use modern machine learning techniques, in particular deep learning algorithms, in combination with traditional computer vision approaches. Specifically, I will talk about real-time 3D reconstruction using RGB-D sensors, which enable us to capture high-fidelity geometric representations of the real world. In a new line of research, we use these representations as input to 3D Neural Networks that infer semantic class labels and object classes directly from the volumetric input. In order to train these data-driven learning methods, we introduce several annotated datasets, such as ScanNet and Matterport3D, that are directly annotated in 3D and allow tailored volumetric CNNs to achieve remarkable accuracy. In addition to these discriminative tasks, we put a strong emphasis on generative models. For instance, we aim to predict missing geometry in occluded regions, and obtain completed 3D reconstructions with the goal of eventual use in production applications. We believe that this research has significant potential for application in content creation scenarios (e.g., for Virtual and Augmented Reality) as well as in the field of Robotics where autonomous entities need to obtain an understanding of the surrounding environment.

## BRIEF BIOGRAPHY

Dr. Matthias Nießner is a Professor at the Technical University of Munich where he leads the Visual Computing Lab. Before, he was a Visiting Assistant Professor at Stanford University. Prof. Nießner's research lies at the intersection of computer vision, graphics, and machine learning, where he is particularly interested in cutting-edge techniques for 3D reconstruction, semantic 3D scene understanding, video editing, and AI-driven video synthesis. In total, he has published over 70 academic publications, including 22 papers at the prestigious ACM Transactions on Graphics (SIGGRAPH / SIGGRAPH Asia) journal and 18 works at the leading vision conferences (CVPR, ECCV, ICCV); several of these works won best paper awards, including at SIGCHI'14, HPG'15, SPG'18, and the SIGGRAPH'16 Emerging Technologies Award for the best Live Demo. Prof. Nießner's work enjoys wide media coverage, with many articles featured in main-stream media including the New York Times, Wall Street Journal, Spiegel, MIT Technological Review, and many more, and his work led to several TV appearances such as on Jimmy Kimmel Live, where Prof. Nießner demonstrated the popular Face2Face technique; Prof. Nießner's academic Youtube channel currently has over 5 million views. For his work, Prof. Nießner received several awards: he is a TUM-IAS

Rudolph Moessbauer Fellow (2017 – ongoing), he won the Google Faculty Award for Machine Perception (2017), the Nvidia Professor Partnership Award (2018), as well as the prestigious ERC Starting Grant 2018 which comes with 1.500.000 Euro in research funding; in 2019, he received the Eurographics Young Researcher Award honoring the best upcoming graphics researcher in Europe. In addition to his academic impact, Prof. Nießner is a co-founder and director of Synthesia Inc., a brand-new startup backed by Marc Cuban, whose aim is to empower storytellers with cutting-edge AI-driven video synthesis.

# The Computing Challenges of Mixed-Reality

Anthony Steed

*University College London, United Kingdom*

**Abstract:** The broad area of mixed-reality (MR) systems, which include augmented reality, virtual reality and related real-time systems, poses new challenges to computing. In this talk, I will highlight some of the computing trends that have enabled current consumer systems, and highlight where requirements for future systems will take us. I will use our own work on ultra-low latency rendering hardware and low-latency networking to illustrate how the quality of the experience is affected by highly real-time machine performance. We will then take these results and extrapolate to describe potential systems that we do not yet know how to build and that will require new hardware and algorithms.

## BRIEF BIOGRAPHY

Anthony Steed is Head of the Virtual Environments and Computer Graphics group at University College London. He has over 25 years' experience in developing virtual reality and other forms of novel user interface system. He has long been interested in creating effective immersive experiences. While originally most of his work considered the engineering of displays and software, more recently it has focussed on user engagement in virtual reality, embodied cognition and the general problem of how to create more effective experiences through careful design of the immersive interface. He received the IEEE VGTC's 2016 Virtual Reality Technical Achievement Award. Prof. Steed is the main author of the recent book "Networked Graphics: Building Networked Graphics and Networked Games". He is currently very interested in tele-collaboration using mixed-reality. Prof. Steed has been involved in a variety of knowledge transfer activities, including four start-up companies. The most recent is Chirp ([chirp.io](http://chirp.io)), which focuses on a problem of co-located interaction in noisy spaces by using sound as data transport.

# High Dynamic Range: Where to next?

Alan Chalmers

*WMG, University of Warwick, United Kingdom*

**Abstract:** High Dynamic Range (HDR) technology has come a long way in the last 20 years. From the first prototype HDR display in 2004, many consumer televisions now boast that they are HDR, while others claim to be “HDR ready”. A significant challenge to the widespread uptake of HDR technology and HDR video in particular, has been the lack of content. While HDR image capture has been available on mobile phones for a number of years, commercial HDR video cameras capable of capturing at 30fps the full range of light a human can see in a scene, and more, still remain elusive. Despite this, whereas HDR was the “hot topic” at major broadcast shows, such as NAB and IBC, in the last year, HDR was hardly mentioned at all. Furthermore, worryingly, HDR is now considered a “solved problem”. This makes it very difficult for researchers to acquire the funding that they need to continue their work. If you simply, arbitrarily state that HDR technology is that which has a peak brightness of  $1,000\text{cd/m}^2$ , as many have done, then you can indeed conclude that HDR has been achieved. However, “true HDR”, has long been defined to mean the difference between the lightest and the darkest region in a scene is at least  $2^{16}:1$ , approximately what the eye can see in a scene with no adaptation. This talk will consider how the term “HDR” has been misused to further commercial interests, and highlight many of the challenges that still remain if “true HDR” is to ever be achieved.

## BRIEF BIOGRAPHY

Alan Chalmers is a Professor of Visualisation at WMG, University of Warwick, UK and a former Royal Society Industrial Fellow. He has an MSc with distinction from Rhodes University, 1985 and a PhD from University of Bristol, 1991. He is Honorary President of Afrigraph and a former Vice President of ACM SIGGRAPH. Chalmers has published over 250 papers in journals and international conferences on HDR, high-fidelity virtual environments, multi-sensory perception, parallel processing and virtual archaeology and successfully supervised 48 PhD students. In addition, Chalmers is a UK representative on IST/37 considering standards within MPEG and a Town Councillor for Kenilworth where he lives.

# Experimental Pitfalls

Helen Purchase

*University of Glasgow, United Kingdom*

**Abstract:** We all run experiments to prove the value of what we do and to try to persuade others that our visualisations are not just pretty but have a useful function outside the research team. But designing and conducting experiments is full of pitfalls: equipment failure, limited participant pool, confounding factors, incomplete data etc. And results are often uncertain and always limited. In my 20 years of running experiments, I have made numerous mistakes - I estimate that I have thrown away about as much data as I have published. In this talk, I discuss some of my failures, highlighting the things that went wrong. As part of this, I discuss the value of conducting follow-on experiments, and some tricky statistical analysis issues to consider.

## BRIEF BIOGRAPHY

Helen C. Purchase is Senior Lecturer in the School of Computing Science at the University of Glasgow. While her main interest is the evaluation of the visual presentation of graphs, she also takes part in several empirical research projects investigating a variety of different visual stimuli. She has published several papers in the area of computer science education and educational technology.
