Preface

During May 12–17, 2013, a seminar on “Information Visualization – Towards Multivariate Network Visualization” (no. 13201) took place at the International Conference and Research Center for Computer Science, Dagstuhl Castle, Germany. The center was initiated by the German government to promote computer science research at the international level. It seeks to foster dialog among the research community, advance academic education and professional development, and transfer knowledge between academia and industry.

Information visualization (InfoVis) is a research area that focuses on the use of visualization techniques to help people understand and analyze data as well as relations between data. While related fields such as scientific visualization involve the presentation of data that have some physical or geometric correspondence (for example, climate patterns, molecular formations, transport networks), InfoVis centers on abstract information without such correspondences, i.e., it is not possible to map this information into the physical world in most cases. Examples of such abstract data are symbolic, tabular, networked, hierarchical, or textual information sources—for example, genealogies, demographic data of a population, or financial trends.

The goal of this third Dagstuhl Seminar on Information Visualization was to bring together theoreticians and practitioners from InfoVis, HCI, and graph drawing with a special *focus on multivariate network visualization*, i.e., on graphs where the nodes and/or edges have additional (multidimensional) attributes. The integration of multivariate data into complex networks and their visual analysis is one of the big challenges not only in visualization, but also in many application areas. Thus, in order to support discussions related to the visualization of real-world data, we also invited researchers from selected application areas, especially bioinformatics, social sciences, and software engineering. The unique “Dagstuhl climate” ensured an open and undisturbed atmosphere to discuss the state-of-the-art, new directions, and open challenges of multivariate network visualization.

This book is the outcome of Dagstuhl Seminar no. 13201. It documents and extends the findings and discussions of the various sessions in detail. During

the last day of the seminar, the most important topics for publication were identified and assigned to interested participants. The resulting author groups worked together to write book chapters on the chosen topics.

We would like to thank all participants of the seminar for the lively discussions and contributions during the seminar as well as the scientific directorate of Dagstuhl Castle for giving us the possibility to organize this event. The abstracts and presentation slides can be found on the Dagstuhl website for this seminar¹. There is an online document that reports on all activities during the seminar². We are also grateful to all the authors for their valuable time and contributions to the book. Last but not least, the seminar and thereby this book would not have been possible without the great help of the staff of Dagstuhl Castle. We would like to acknowledge all of them for their assistance.

Preface	V
List of Contributors	VII
1 Introduction to Multivariate Network Visualization	1
<i>Andreas Kerren, Helen C. Purchase, Matthew O. Ward</i>	
1.1 Multivariate Networks: Definitions and Terminology	2
1.2 Existing Visualizations	3
1.3 Outline of This Book	6
References	7

Part I: Application Domains – Characteristics and Challenges

2 Multivariate Networks in Software Engineering	13
<i>Stephan Diehl, Alexandru C. Telea</i>	
2.1 Aims and Scope	13
2.1.1 History and Definitions	14
2.1.2 Importance	14
2.2 Data Characteristics	15
2.2.1 Entities	15
2.2.2 Relations	15
2.2.3 Attributes	16
2.2.4 Software as Multivariate Time-Dependent Graphs ...	17
2.2.5 Reference Implementation	17
2.2.6 Software Data <i>vs.</i> other InfoVis Domains	19
2.3 Applications	21
2.3.1 Structure Visualization	21
2.3.2 Behavior Visualization	26
2.3.3 Evolution Visualization	28
2.4 Challenges and Future Directions	32
References	34

3	Multivariate Social Network Visual Analytics.....	37
	<i>Chris Muelder, Liang Gou, Kwan-Liu Ma, Michelle X. Zhou</i>	
3.1	Data Characteristics	37
3.1.1	Traditional Data Collection	38
3.1.2	Data Collection from Online Social Media Networks ..	38
3.2	Task Characteristics	39
3.2.1	Understanding Social Network Nodes	39
3.2.2	Understanding Social Network Links	39
3.2.3	Understanding Social Networks	39
3.3	Examples of Technologies	40
3.3.1	Clustering	40
3.3.2	Network Centralities	41
3.3.3	Centrality Derivatives	41
3.3.4	Traditional Network Layouts	42
3.3.5	Improved Network Layouts	43
3.3.6	Multivariate Social Networks	44
3.3.7	Dynamic Social Networks	46
3.3.8	Egocentric Approaches	47
3.3.9	TreeNetViz: Revealing Patterns of Networks with Hierarchical Attributes	47
3.3.10	SocialNetSense: Making Sense of Multivariate Social Networks	50
3.3.11	Summary	54
3.4	Challenges and Future Directions	55
	References	56
4	Multivariate Networks in the Life Sciences	61
	<i>Oliver Kohlbacher, Falk Schreiber, Matthew O. Ward</i>	
4.1	Characteristics of Data and Tasks	62
4.1.1	Types of Biological Networks	62
4.1.2	Data Mapping and Multivariate Networks	63
4.2	Use Cases	66
4.2.1	Signaling	66
4.2.2	Genetic Linkage	66
4.2.3	Relationship Discovery Based on Document Analysis	67
4.2.4	Gene Regulation and Transcriptome Data	68
4.3	Challenges	69
4.3.1	Scale	70
4.3.2	Uncertainty/Ambiguity	70
4.3.3	Heterogeneity	71
4.3.4	Interactivity	71
4.3.5	Standardization	71
4.4	Summary and Conclusions	72
	References	72

Part II: Topics in Multivariate Network Research

5 Tasks for Multivariate Network Analysis	77
<i>A. Johannes Pretorius, Helen C. Purchase, John T. Stasko</i>	
5.1 Entities and Properties	78
5.2 Tasks	79
5.2.1 General Task Taxonomy	80
5.2.2 Tasks for Multivariate Network Analysis	83
5.3 Discussion	92
5.4 Conclusion	94
References	95
6 Interaction in the Visualization of Multivariate Networks	97
<i>Michael Wybrow, Niklas Elmqvist, Jean-Daniel Fekete, Tatiana von Landesberger, Jarke J. van Wijk, Björn Zimmer</i>	
6.1 Background	98
6.2 Classification of Interactions	101
6.2.1 View-Level Interactions	102
6.2.2 Visual Structure-Level Interactions	104
6.2.3 Data-Level Interactions	106
6.3 Exemplars	109
6.3.1 GraphDice	110
6.3.2 GraphTrail	111
6.3.3 State Transition Networks	112
6.3.4 Parallel Node-Link Bands	113
6.4 Recommendations and Guidelines	115
6.4.1 Learnability	115
6.4.2 Flexibility	116
6.4.3 Robustness	117
6.5 Challenges and Vision	118
References	121
7 Novel Visual Metaphors for Multivariate Networks	127
<i>Jonathan C. Roberts, Jing Yang, Oliver Kohlbacher, Matthew O. Ward, Michelle X. Zhou</i>	
7.1 Background	128
7.1.1 Semantically Rich Data	128
7.1.2 Where Ideas Come From?	129
7.1.3 The Ideation Process	131
7.1.4 The Visual Mapping Process	132
7.2 Classes of Metaphors	135
7.2.1 Nature-Inspired	135
7.2.2 Non-physical	140

7.3	Man-Made	141
7.4	Visualization-Inspired	142
7.5	Proposed New Ideas	144
7.5.1	Graphs/Networks	145
7.5.2	Hierarchies	145
7.6	Summary and Conclusions	147
	References	147
8	Temporal Multivariate Networks	151
	<i>Daniel Archambault, James Abello, Jessie Kennedy, Stephen Kobourov, Kwan-Liu Ma, Silvia Miksch, Chris Muelder, Alexandru C. Telea</i>	
8.1	Definitions	151
8.1.1	Structure, Behavior, and Evolution	152
8.1.2	Formal Definitions of Temporal Multivariate Networks	153
8.2	Refining Our Models and Definitions for Time	154
8.3	Survey of Representations and Algorithms	156
8.3.1	Static Graph Layouts	157
8.3.2	Dynamic Graph Layouts	158
8.3.3	Animation versus Small Multiples	161
8.3.4	Mental Map Preservation	162
8.3.5	Alternative Representations	162
8.3.6	Static Temporal Plots	163
8.3.7	Dynamic Graph Analytics	164
8.4	Applications to Software Engineering	165
8.5	Open Problems	167
8.5.1	Attribute Dimensionality	167
8.5.2	Capturing Patterns	168
8.5.3	Data Size	168
8.6	Summary and Conclusions	169
	References	169
9	Heterogeneous Networks on Multiple Levels	175
