Preface

Welcome to the **9th International Symposium on Visual Information Communication and Interaction (VINCI 2016)** held in Dallas, TX, USA from September 24th to 26th, 2016. The objective of this symposium series is to provide a forum for researchers, artists, designers, and industrial practitioners to discuss the state of the art in visual communication theories, designs, and applications. As in past years, the papers in these proceedings represent the most interesting and exciting recent research in the area of visual communication.

The conference this year received 52 submissions in total (i.e., 42 full paper, 6 short paper and 4 poster submissions) from the international research community, each of which was carefully reviewed by at least three Program Committee members. Based on these reviews, we accepted 14 full papers finally (33.3% acceptance rate). In addition, because of the high quality of submissions, we selected 5 from the full/short paper submissions to be presented as short papers. We also accepted 9 submissions as posters from the poster and remaining paper submissions. The 14 full papers, 5 short papers and 9 posters presented here cover a broad range of visual communication topics, ranging from visualization, to designs, theories and applications. The conference program also includes a panel organized by Vetricia L. Byrd (Purdue University) and Joseph A. Cottam (CREST/Indiana University) dedicated to visualization capacity building.

Moreover, we are proud to have two fascinating plenary keynote talks included into the program, given by internationally distinguished researchers: Roger Malina (The University of Texas at Dallas, USA) and Georges Grinstein (University of Massachusetts Lowell, USA). They contribute with their expertise and experience to provide a deeper understanding of the conference scope and topics.

We thank the authors of all submissions, whose work and dedication made it possible to put together an exciting program of high technical quality. Next, we would also like to express our deep appreciation to the members of the International Program Committee (including our auxiliary reviewers) for the work they have put into carefully reading, evaluating, and writing insightful reviews of the submitted papers and posters. We are also grateful to all organizing committee members: the symposium and these proceedings would not have been possible without their assistance. Finally, we thank the invited speakers for their invaluable contribution and sharing their vision in their keynote talks.

Conference Organization

General Chair: Kang Zhang (*The University of Texas at Dallas, USA*)

Program Chair: Andreas Kerren (*Linnaeus University, Sweden*)

Publicity Chair: Jie Li (*Tianjin University, China*)

Publication Chair: Kostiantyn Kucher (*Linnaeus University, Sweden*)

Local Organization Chair: Pushpa Kumar (*The University of Texas at Dallas, USA*)

Finance Chair: Jey Veerasamy (*The University of Texas at Dallas, USA*)

Program Committee: Wolfgang Aigner (*St. Pölten University of Applied Sciences*)
Benjamin Bach (*Microsoft Research — Inria Joint Centre*)
Robert P. Biuk-Aghai (*University of Macau*)
Rita Borgo (*Swansea University*)
Paolo Bottoni (*Sapienza University of Rome*)
Paul Bourke (*University of New South Wales*)
Stephen Brooks (*Dalhousie University*)
Michael Burch (*University of Stuttgart*)
Antonio Camurri (*University of Genoa*)
Daniel Cernea (*AGT International*)
Jian Chen (*University of Maryland*)
Wei Chen (*Zhejiang University*)
Gennaro Costagliola (*Università di Salerno*)
Achim Ebert (*University of Kaiserslautern*)
Mai Elshehaly (*Virginia Tech*)
Camilla Forsell (*Linköpings Universitet*)
Vittorio Fuccella (*Università di Salerno*)
Philip Galanter (*Texas A&M University*)
Liang Gou (*IBM Research — Almaden*)
Denis Gracanin (*Virginia Tech*)
Ira Greenberg (*Southern Methodist University*)
Theresia Gschwandtner (*Vienna University of Technology*)
Masahito Hirakawa (*Shimane University*)
Seok-Hee Hong (*University of Sydney*)
Weidong Huang (*University of Tasmania*)
Xiaodi Huang (*Charles Sturt University*)
Takayuki Itoh (*Ochanomizu University*)
Karsten Klein (*Monash University*)
Jun Kong (*North Dakota State University*)

Program Committee Robert S Laramée (*Swansea University*)
(continued): Yina Li (*Nankai University*)
Zhanping Liu (*Old Dominion University*)
Aidong Lu (*UNC Charlotte*)
Kresimir Matkovic (*VRVis Research Center*)
John McGhee (*UNSW Australia*)
Kazuo Misue (*University of Tsukuba*)
Quang Vinh Nguyen (*University of Western Sydney*)
Margit Pohl (*Vienna University of Technology*)
Francois Poulet (*University of Rennes 1 — IRISA*)
Raimondo Schettini (*Università degli Studi di Milano-Bicocca*)

Roger Malina

Title: Beyond the Two Cultures: A Crisis in Representation

Abstract

As an astrophysicist, I have spent my career bathing in astronomical data, the data world is as real to me as the sensory physical world. Yet we are still in the stone age of representing digital data in forms that we can understand and feel. Three years ago I started the UT Dallas ArtSciLab where artists and scientists work side by side making trouble with data. I will present our work with neuroscientists, astronomers and geoscientists and also talk about the new born digital hybrids whose existence gives the lie to the very concept of C P Snow's Two Cultures.

Biography

Malina is a space scientist and astronomer, an art-science researcher, Arts and Technology Distinguished Chair Professor, and Professor of Physics, at UT Dallas. He obtained his B.S. in physics from MIT in 1972, and his Ph.D. in astronomy from the University of California, Berkeley, in 1979. Founded the ArtSciLab which hosts projects which involve collaboration between artists and scientists, resulting in art works, scientific data exploration tools, and public engagement activities involving the integration of the arts, design and humanities in science, technology, education and mathematics (STEAM). Malina is an elected member of the International Academy of Astronautics. "Laser d'or" Prize, from the International Video Art Organization.

Georges Grinstein

Title: Visual Analytics and the VAST Challenges: this year's Challenge and a retrospective look at an influential international competition

Abstract

The VAST Challenges are a decade old and have had large international participation. The challenge data sets are mostly synthetic with embedded ground truth and participants are asked to solve a particular problem, which in many cases involves discovering that ground truth, which in turn makes it easier to objectively evaluate submissions. But submissions are also evaluated several other ways. I will discuss several key problems in Visual Analytics, provide examples of how the VAST Challenges were developed as an attack on

these problems, and show award winning solutions. I will also discuss the importance of open source tools in solving these problems.

Biography

Georges Grinstein is Professor of Computer Science at the University of Massachusetts Lowell, was head of its Bioinformatics Program, Director of its Institute for Visualization and Perception Research, and is now Chief Scientific Officer of Weave Visual Analytics. He received his Ph.D. in Mathematics from the University of Rochester in 1978.

His work is broad and interdisciplinary, covering the perceptual and cognitive foundations of visualization, very high-dimensional data visualization, visual analytics and applications. The emphasis is on the modeling, visualization, and analysis of complex information data and systems.

He has over 40 years in academia with extensive consulting, over 300 research grants, products in use nationally and internationally, several patents, numerous publications in journals and conferences, a book on interactive data visualization, founded several companies, been the organizer or chair of national and international conferences and workshops in Computer Graphics, in Visualization, and in Data Mining. He has given numerous keynotes and mentored over 40 doctoral students and hundreds of graduate students. He has been on the editorial boards of several journals in Computer Graphics and Data Mining, a member of ANSI and ISO, a NATO Expert, and a technology consultant for various government agencies and commercial organizations.

For the last ten years he has co-chaired the IEEE VAST Challenges in visual analytics leading to new research areas. He has developed and taught new courses, one of which Radical Design focused on how to develop radical new products instead of evolutionary ones. He is a member of the Department of Homeland Security's Center of Excellence CCICADA (Command, Control and Interoperability Center for Advanced Data Analysis), and directs the development of Weave, an open source web-based interactive collaborative visual analytics system incorporating numerous innovations.
