

Multiple Remote Tower – Bane or Boon?

Jörn Jakobi

DLR, Institute of Flight Guidance, Braunschweig

DATS Workshop, 11/02/2021

What is 'Multiple' Remote Tower?

SESAR2020 PJ05, DLR Braunschweig

SESAR2020 PJ05, LFV, Sturup

'multiple mode of operation'
means the provision of ATS from one remote tower/remote tower module for two or more aerodromes at the same time (i.e. simultaneously);

EASA, Annex I to ED Decision 2019/004/R

Past 'Multiple' Research

First DLR Multiple trials (2010)

SESAR P06.09.03 & P06.08.04 (2014)

SESAR2020 Wave 1 (2016-2019) PJ05 Remote Tower for Multiple Airports

WP2 Solution PJ.05-02

Multiple Remote Tower Module

WP3 Solution PJ.05-03

RTC with Flexible Allocation of Aerodromes to MRTMs

Validation Set Up

Typical Traffic Scenario

Safety Assessment

Can the situation be solved without major impairment?

YES

No impairment Good	ATCO workload is low to easily achieve the desired performance.	1
No impairment Good	ATCO workload is adequate to achieve the desired performance.	2
Minor impairment Fair	ATCO requires a minor increased workload to achieve the desired performance.	3

NO

Can the situation be solved by measures reducing capacity?

YES

ATC influences capacity

Impairment of efficiency

Minor Unpleasant delays	ATCO responds with delay to pilot's requests.	4
Moderate Disturbing delays	Situation leads to moderate delays in the traffic management.	5
High Very disturbing delays	Situation leads to strongly delays in the traffic management.	6

NO

Can the situation be solved by measures reducing safety?

YES

ATCO workload is too high and should be reduced

Impairment of safety

Impairments in prediction of traffic development	ATCO directs traffic sporadically, abruptly and does no longer plans ahead.	7
Impairments due to information processing	ATCO cannot build a complete picture of the traffic situation, confuses information and corrects himself/herself often.	8
Impairments due to information gathering	ATCO must neglect areas/information while monitoring and therefore misses aircraft.	9
Major Impairment	ATCO cannot longer control the traffic situation.	10

NO

Safety Results

N = 35
M = 3.80
SD = 1.24

Splitting & Merging

CHECKLIST Handover

CHECKLIST Handover

1. REQUEST from ATCO-HANDOVER to ATCO-TAKEOVER to take control of Aerodrome X (& Y)

ATCO-HANDOVER Handover Aerodrome X (Y)

ATCO-TAKEOVER Go Ahead / Standby

2. ATCO-HANDOVER provides following information:

- * Relevant weather information (visibility, wind, etc.)

- * Runway in use (Runway condition)
- * Equipment failure (only if failures exist)
- * Aerodrome restrictions/closures (if any)
- * Traffic on Frequency (VFR/IFR) including
 - * position
 - * intentions
 - * clearances

3. Actual HANDOVER

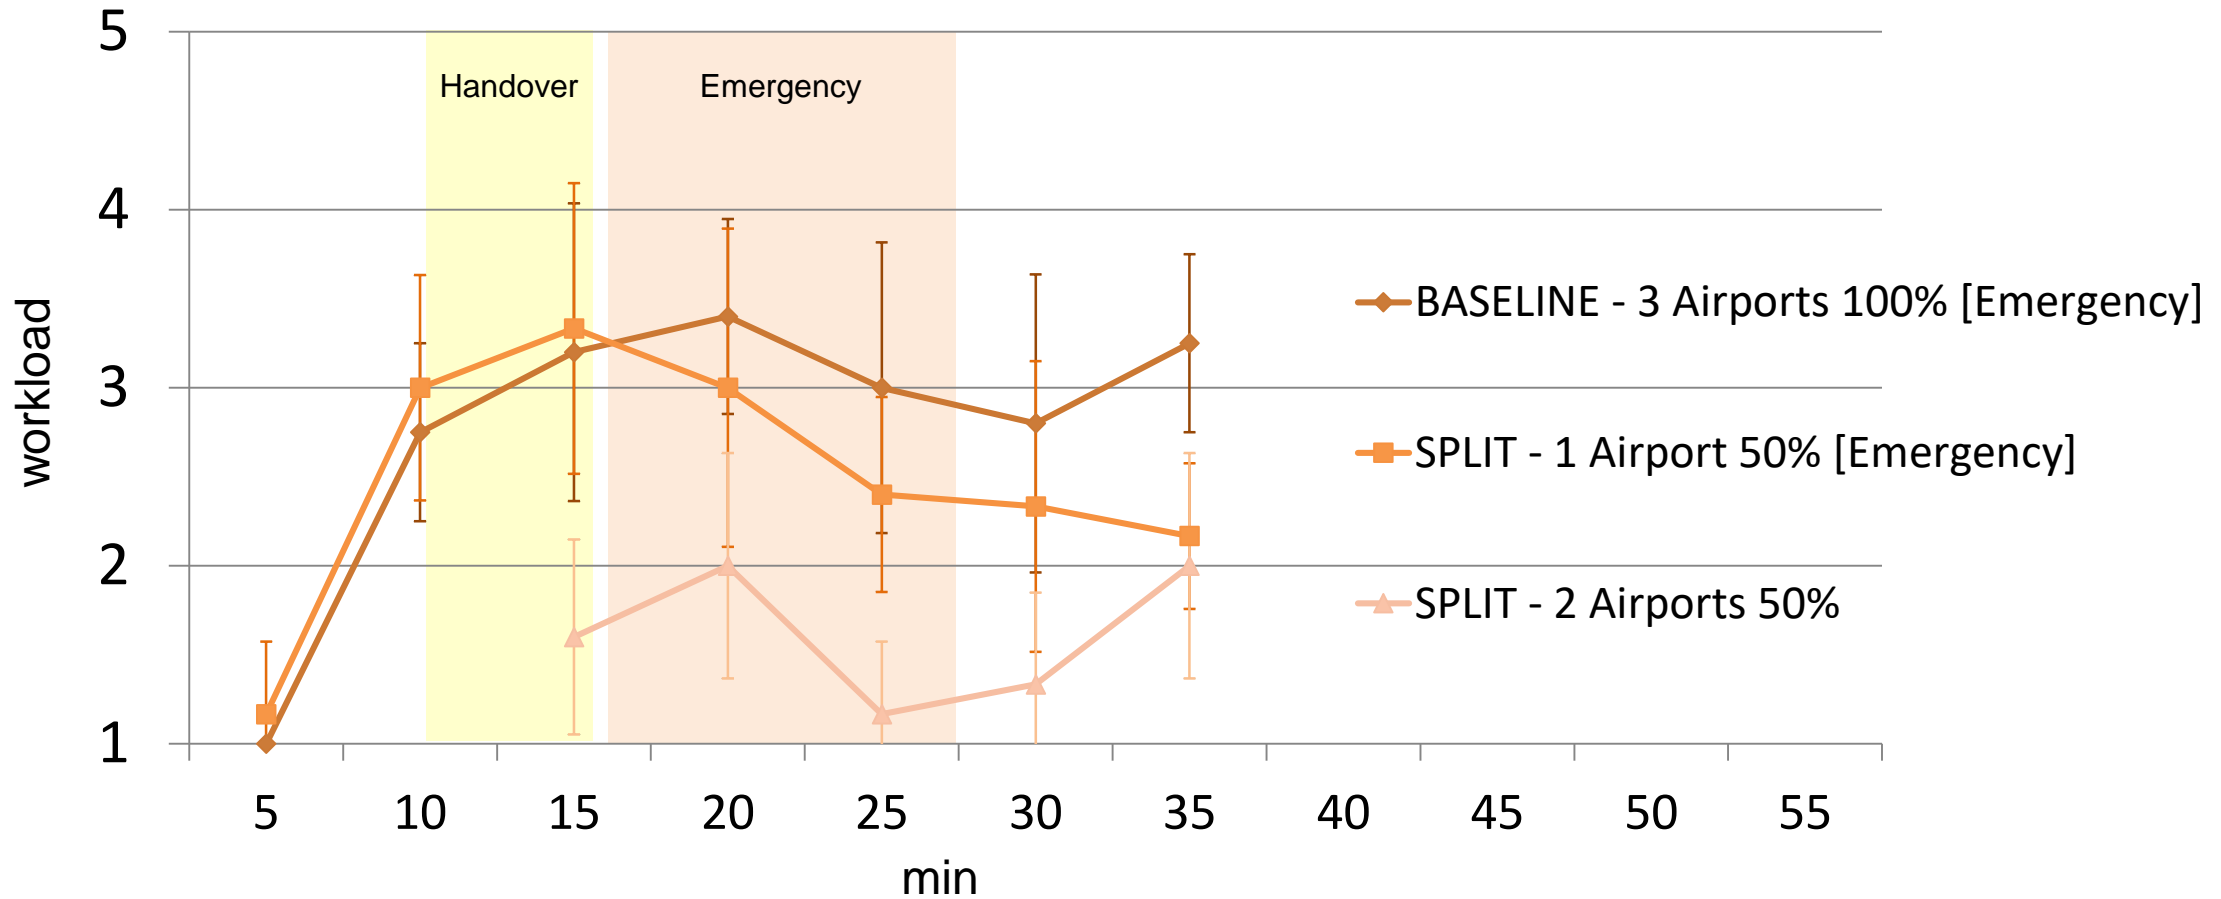

ATCO-TAKEOVER Information copied. Taking over

ATCO-HANDOVER Roger

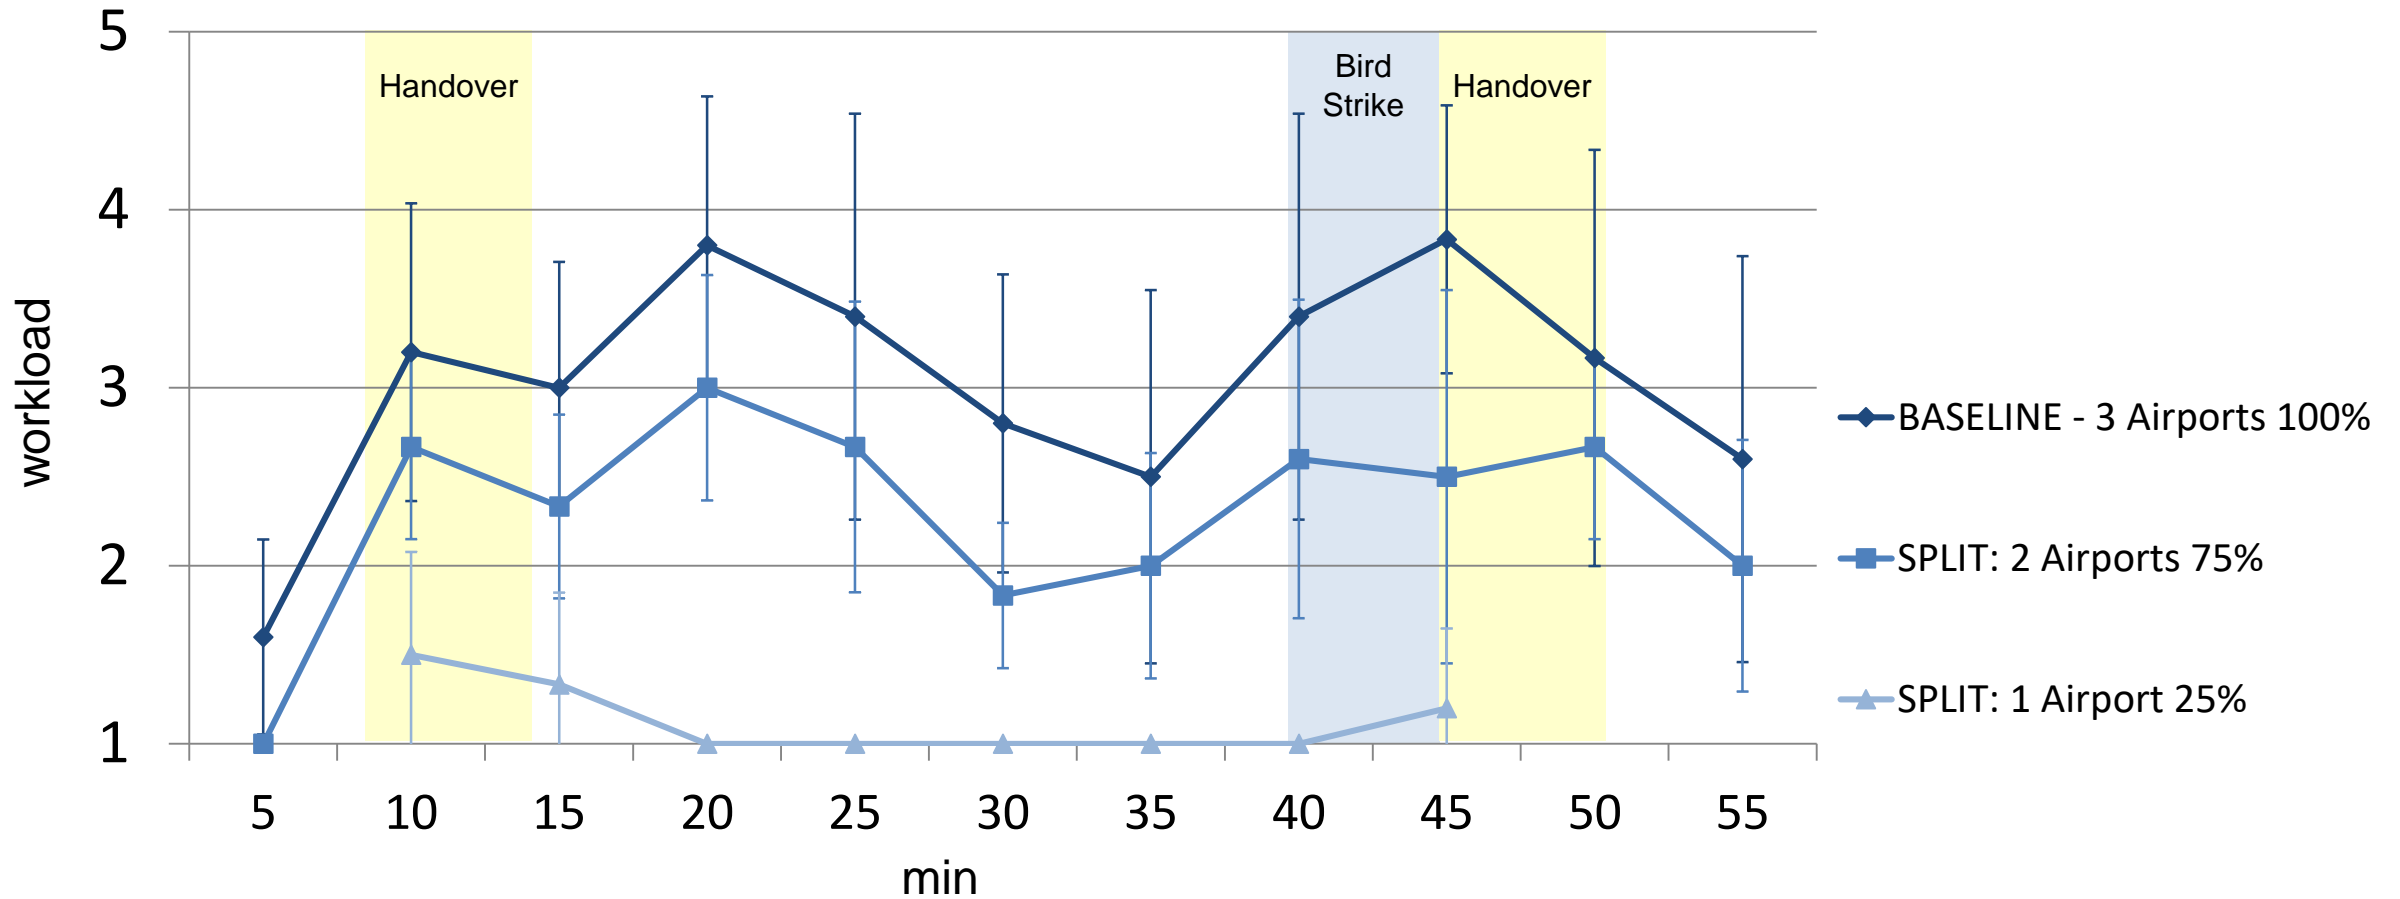

** handover of an aerodrome should happen best in a "clean configuration", that is, most probably no need to intervene for the next 30 seconds.*

I.S.A. Workload over the time

I.S.A. Workload over the time

Radio Transmission [duration]

RT sec per hour

3 airports = 30mov/h

Airport A = 50%

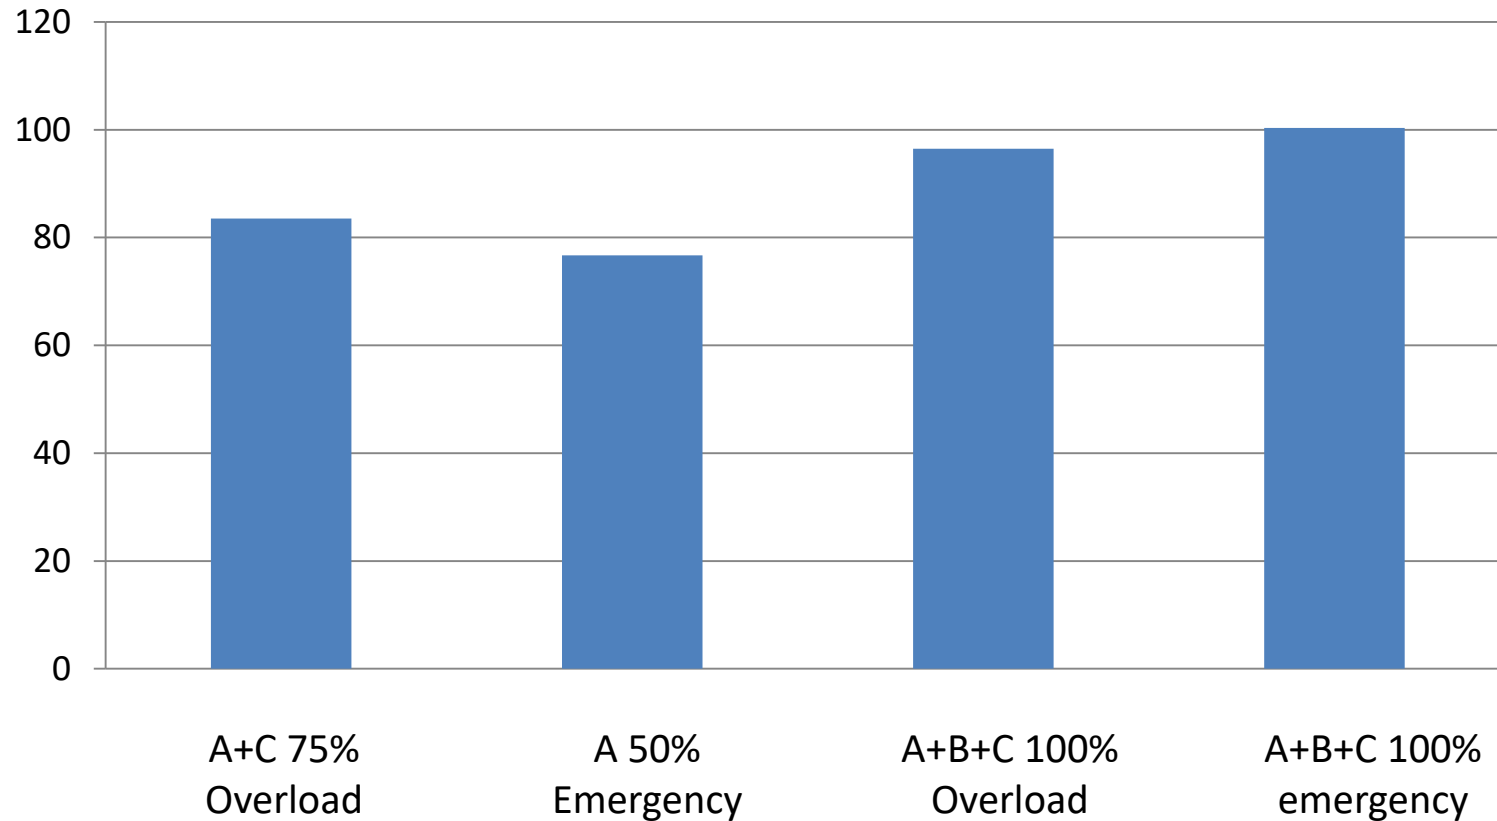

Airport B = 25%

Airport C = 25%

Radio Transmission [number]

#RT per hour

3 airports = 30mov/h

Airport A = 50%

Airport B = 25%

Airport C = 25%

Myths to Multiple Remote Tower

- An ACTO is not able to work multiple
- *Multiple* needs new procedures
- *Multiple* only works with additional ground surveillance
- ATCOs do not like working *multiple*

Be prepared for
the future !

Home www.remote-tower.eu

The modernisation of air traffic management is one of the main challenges of current aeronautics research. The [Single European Sky ATM Research \(SESAR\)](#) project defines, develops and deploys what is needed to increase ATM performance and build Europe's intelligent air transport system.

Part of SESAR are the projects **PJ05 "Remote Tower for Multiple Airports"** and **PJ05-W2 "Digital Technologies for Tower"**, which focus on the safe and efficient airport of the future. By bringing the concept of remotely controlling multiple airports as well as HMI interaction modes for airport towers to higher maturity levels, the SESAR projects aim at providing small and medium sized airports with more cost-efficient and service tailored air traffic services.

The current programme is [SESAR 2020](#) supports projects to deliver solutions in four key areas, namely airport operations, network operations, air traffic services and technology enablers. It is running from 2016 to 2024 with a budget of 1.6 billion Euro.
